Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

This row of twelve two-story, two-bay wide vernacular Renaissance Revival-style brick houses with shed roofs and sheet metal cornices were built c. 1900 – 1905. Only a few of the houses retain their original brick facades, which were originally painted; the rest have been covered with formstone.

After the use of wood was outlawed for cornices in 1892, sheet metal became the predominant material used. By the early years of the 20th century, the most popular form of sheet metal cornice sported ball finials and often classical motifs like swags pressed into the frieze area. Generally, only main street two story houses had decorated friezes-the builder saved money on his small street versions by eliminating them. Likewise, while the main street houses in this style would have marble basements, stringers, lintels, and steps, builders used no marble at all on their small street versions, painting the basements white instead. Main street houses would have stained glass transoms over both the door and the wide first floor window; on the small streets builders offered stained glass only in the door transom.

The houses are two stories in height, 12' 1" and 12' 3" wide (the two end units being 12' 6" and 12' 7") and occupy lots 53' deep. Each house is only two rooms deep and there is no backbuilding. The houses are constructed in running bond and were originally painted. Each house has a single hooded chimney located near the front and rear of the house. The shed roof is capped by a sheet metal cornice, consisting of a deeply projecting crown molding set above a molded frieze area, with end brackets framing every four houses. The arched upper portion of the end bracket is decorated with a stamped rosette, which rises above the roofline; the lower portion is decorated with vertical grooves and ends with a distinct trefoil pattern. Beneath the cornice two punched sheet metal panels provided further decoration as well as serving as ventilation for the roof area.

The door and window openings have segmentally arched brick lintels, with plain tympanums. The sills are wood. Most windows have their original 1/1 sash; one has 6/6 replacement sash and a six-paneled colonial door, indicating that the neighborhood is beginning to be "restored." The houses sit on medium-high basements lit by a single-light sash. Each front door (no original doors remain) is reached by three brick or concrete steps.

Specific dates c. 1900 - 1905

Builder/Architect

Prepare both a summary paragraph of significance and a general statement of history and support.

This group of houses is significant as representing the very last type of small street houses to be built, in the period c. 1905 - 1909, when a new city ordinance outlawed building houses on streets less than 40' wide. They are also significant in that they are built in the Renaissance Revival style, which became popular for three-story houses in Baltimore in the 1890s; thus, they represent the level of architectural stylishness achieved by many builders of small street houses.

The houses were built according to a pattern that was quite common to the city's working class neighborhoods of the period 1870 to 1910. Recognizing that workers held different levels of jobs (and pay), builders created a hierarchy of house sizes (and prices) in the new neighborhoods going up to serve the expanding factory districts ringing the harbor and northeast of the central city. Builders acquired anywhere from an eighth to a half of a city block and built 14' to 15'-wide two-story houses on the main streets, and smaller, 11' to 13'-wide two-story houses on the narrower streets bisecting the blocks. Typically, in this period, main street houses might sell for \$1,200 to \$1,500; small street houses for \$700 - \$900. Occasionally, the builder retained ownership of his small street houses to provide income for himself as rental properties. In this way people of varying means could afford to live in the same block. If they couldn't afford the approximately \$750 purchase price of the small street houses, then they *could* afford the \$8 or so a month it would cost to rent one, while they saved to be able to buy their own home later.

The land on which these houses are built originally belonged to the Patterson family as part of their 18th century estate, which also included the land given by the family to the city for Patterson Park. In the 1870s and 1880s the Patterson heirs began developing this block by leasing parcels to various builders who constructed modestly-scaled and priced housing for the mainly German immigrant families who were settling near the port-related industries of Canton. Most of the houses sold to mainly German-American semi-skilled tradesmen and laborers employed in nearby factories, who received mortgages from a variety of local building and loans, many of them sponsored by the German community.
